ALPHA NASDAQ OCIO INDEX

Methodology & Disclosures

Data Source

The Alpha Nasdaq OCIO indices are based on anonymized account-level return streams, asset allocation and metadata reported directly by OCIO firms. The Alpha Nasdaq OCIO indices use this anonymously reported data to construct a family of indices that represent the broad OCIO market along with variations of the OCIO market to more appropriately reflect the nuances across sub-categories, such as plan type and risk profile.

Index Constituents

The broad market Alpha Nasdaq OCIO index includes all account-level returns streams reported by OCIOs. The plan type Alpha Nasdaq OCIO indices are based on the associated plan type for each account as reported by each OCIO. Below are the number of observations included in each of the Alpha Nasdaq OCIO indices as of 03/31/2026. Unreported periods have too few observations to calculate a result.

- Aggressive: 0-20% allocation to risk-mitigating asset classes
- Moderately Aggressive: 21-30% allocation to risk-mitigating asset classes
- Moderate: 31-50% allocation to risk-mitigating asset classes
- Moderately Conservative: 51-75% allocation to risk-mitigating asset classes
- Conservative: 76-100% allocation to risk-mitigating asset classes

Each of the Alpha Nasdaq OCIO indices are calculated using the average net of fees return, as reported by each OCIO, for all the constituents within a given index. All constituents are equally weighted in each respective index. A minimum of 15 accounts are required to create a sub-category of the Alpha Nasdaq OCIO Broad Market index.
